

How to Download and Install Anaconda

1. Go to the [Anaconda Website](#) and choose a Python 3.x graphical installer (A) or a Python 2.x graphical installer (B). If you aren't sure which Python version you want to install, choose Python 3. Do not choose both. Note: see our [installing anaconda on Mac OS X tutorial](#) if you're not on Windows.

2. Locate your download and double click it.

When the screen below appears, click on Next.

Anaconda3 5.1.0 (64-bit) Setup

Welcome to Anaconda3 5.1.0 (64-bit) Setup

Setup will guide you through the installation of Anaconda3 5.1.0 (64-bit).

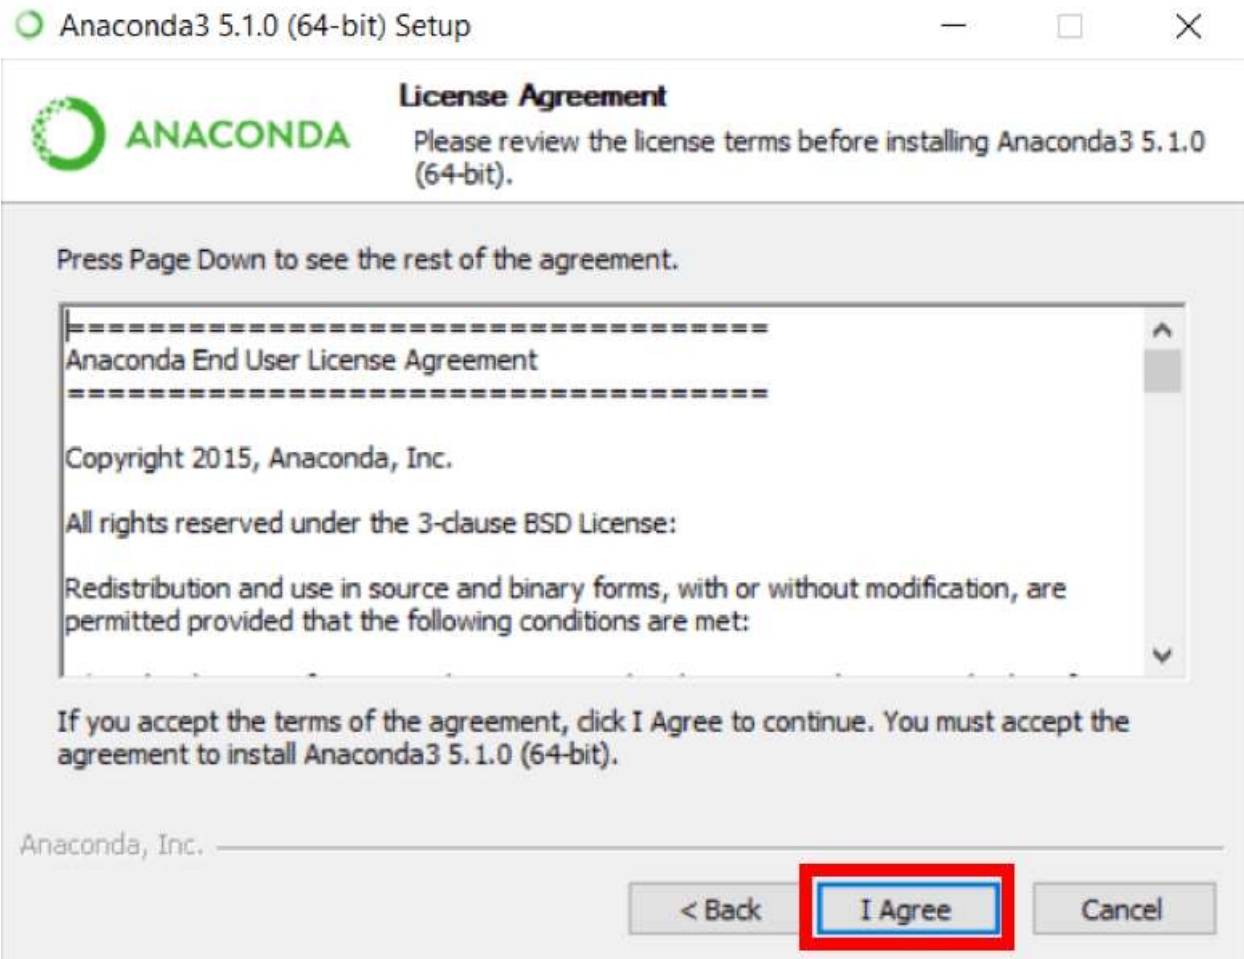

It is recommended that you close all other applications before starting Setup. This will make it possible to update relevant system files without having to reboot your computer.

Click Next to continue.

Cancel

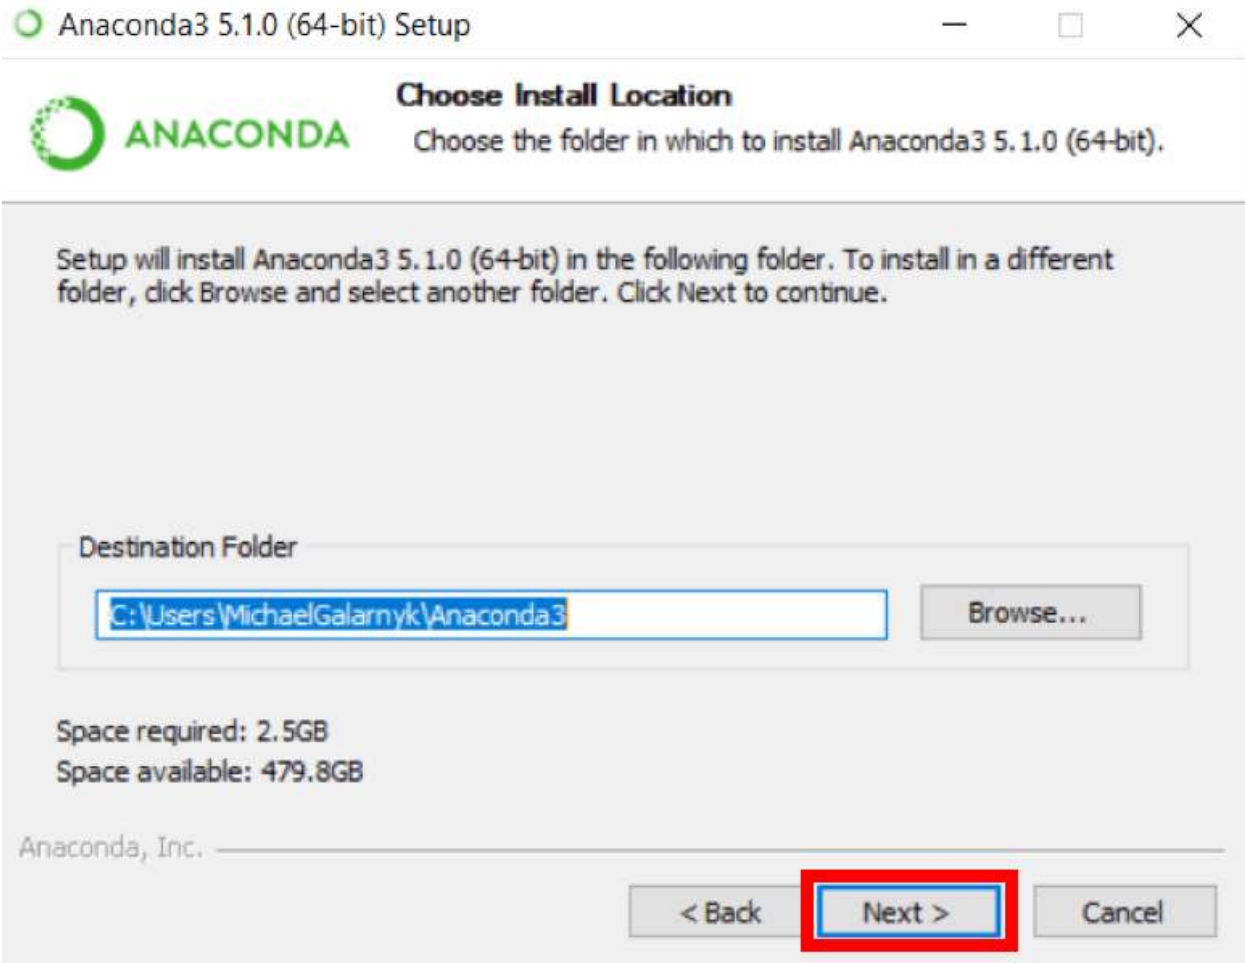

3. Read the license agreement and click on I Agree.

4. Click on Next.

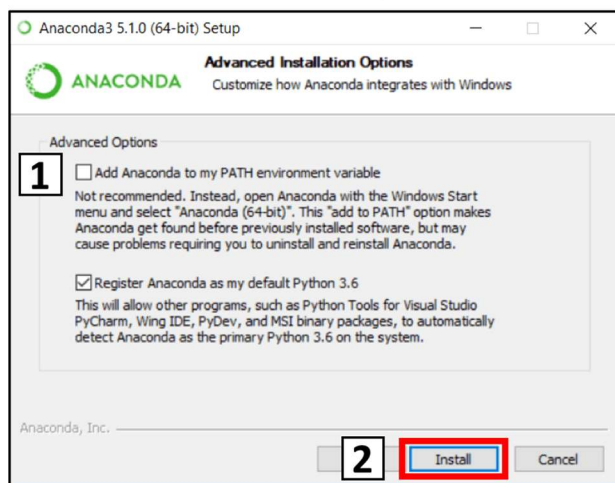

5. Note your installation location and then click Next.

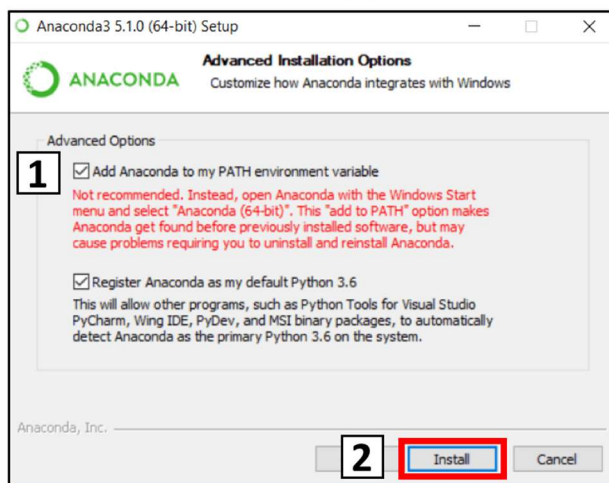

6. This is an important part of the installation process. The recommended approach is to not check the box to add Anaconda to your path. This means you will have to use Anaconda Navigator or the Anaconda Command Prompt (located in the Start Menu under "Anaconda") when you wish to use Anaconda (you can always add Anaconda to your PATH later if you don't check the box). If you want to be able to use Anaconda in your command prompt (or git bash, cmd, powershell etc), please use the alternative approach and check the box.

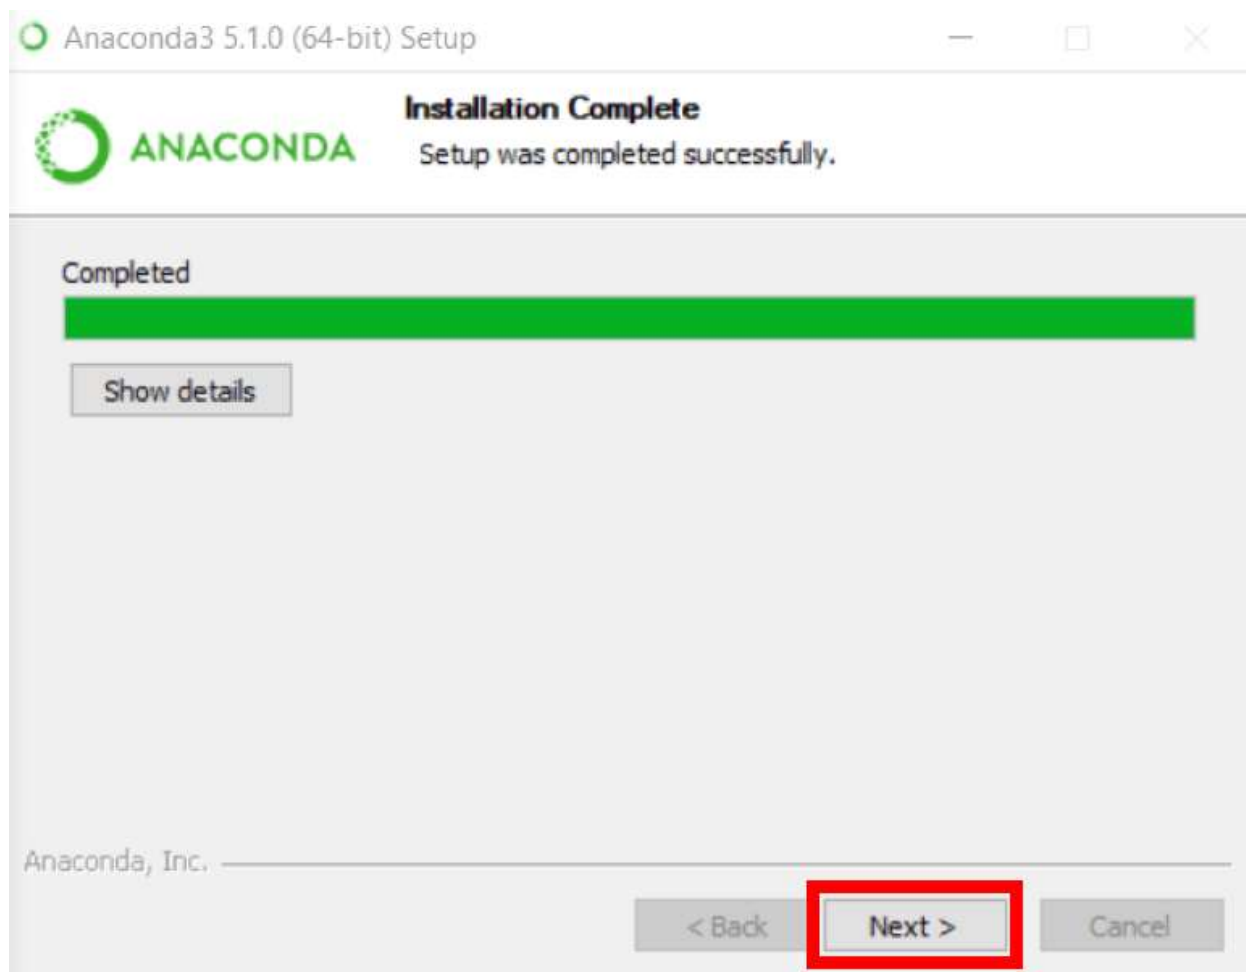

Recommended Approach

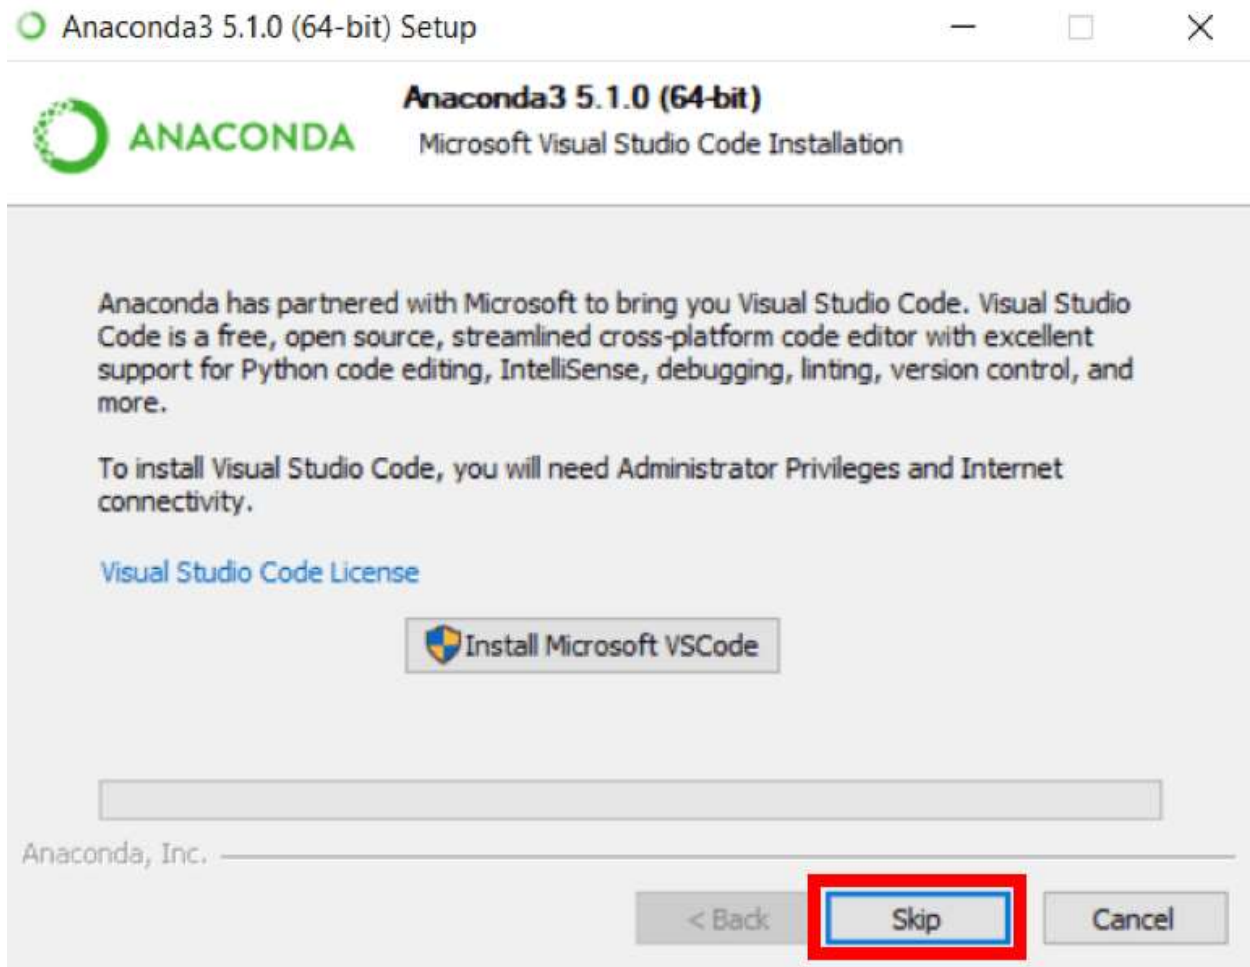

Alternative Approach

7. Click on Next.

8. You can install Microsoft VSCode if you wish, but it is optional.

9. Click on Finish.

Thanks for installing Anaconda3!

Anaconda is the most popular Python data science platform.

Installation guide for Mac Users:

Part 1: Downloading Anaconda

1. Open your web browser and navigate to the Anaconda website:
<https://www.anaconda.com/products/individual>
2. On the Anaconda Individual Edition page, you will see two options: "Windows" and "macOS." Choose the appropriate option for your operating system and click the "Download" button.

Part 2: Installing Anaconda on macOS

3. After downloading the Anaconda installer for macOS, locate the .pkg file (e.g., "Anaconda3-2021.05-MacOSX-x86_64.pkg").
4. Double-click the .pkg file to start the installation.
5. The installer will guide you through the installation process. Click "Continue" when prompted.
6. Read the license agreement, click "Continue," and then click "Agree" to proceed.
7. Choose the destination where you want to install Anaconda, or keep the default location. Click "Install."
8. If you have administrative privileges, enter your username and password when prompted, and then click "Install Software."
9. The installation process will begin, and it may take some time to complete.
10. Once the installation is finished, click "Close" to exit the installer.

Notes:

- Those who want to check the anaconda navigator and available tools, please check the link:
<https://docs.anaconda.com/free/navigator/overview/>
- Getting familiar with the navigator pane is not required before the class. I will talk about them in detail in the class. Just make sure to install the anaconda in your device prior to the class.
